DETAILED ACTION

Election/Restrictions

It is noted that the numbering of the second claim 52 is not in accordance with 37 CFR 1.126. Misnumbered second claim 52 have been renumbered as 53.

Claims 44-58 are pending and subjected to the following restriction requirement.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group 1. Claims 44-50, drawn to:

- a) a nucleic acid encoding the polypeptide of SEQ ID NO:2, or variants thereof,
- b) a nucleic acid comprising the nucleic acid of claim 44 and control sequences, and recombinant cells modified to contain the nucleic acid of (b)
- c) a method for producing a PHOR-1 polypeptide, classified in class 435, subclasses 69.1, 320.1, 325, and class 536, subclass 23.1.

Group 2. Claims 51-53, drawn to the polypeptide of SEQ ID NO:2 or variants thereof, classified in class 530, subclass 350.

Group 3. Claims 54-57, drawn to antibodies or fragments thereof, that specifically bind to the polypeptide of SEQ ID NO:2, classified in class 530, subclass 387.1.

Group 4. Claim 58, drawn to a method for detecting the concentration of a PHOR-1 polypeptide, classified in class 435, subclass 7.1.

The inventions are distinct, each from each other because of the following reasons:

Art Unit: 1642

Groups 2 and 4 are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. 806.05 (h)). In this instant case, a polypeptide could be used for several purposes, e.g. for biochemical assay, for making antibodies, and for making an affinity column to purify its antibodies.

In addition, groups 3 and 4 are related as product and process of use. In this instant case, an antibody could be used for several purposes, e.g for immunoassay, for purification of its antigen.

Further, the product of group 1 is not related to the methods of group 4, because the polynucleotide of group 1 is not used in the method of group 4.

The products of groups 1-3 are patentably distinct, because they are drawn to entirely different biochemicals, having different structures, biological properties and activities.

Because these inventions are distinct for the reason given above and have acquired a separate status in the art, and further, because the searches for the groups are not co-extensive, and therefore, it would be a serious burden for the Examiner to examine all the groups and species together, restriction for examination purposes as indicated is proper.

Applicants are required under 35 USC 121 to elect a single disclosed group for prosecution on the merits to which the claims shall be restricted even though the requirement could be traversed.

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(h).
